

Improvements to NAVSAN's website

Important fixes to be made:

- Years experience shows 300+ in the "about" page

- 'Service' should be changed to 'Services' in the navigation bar

Design & UX Improvements:

Home page:

- The header can be made thinner.

- Hero Slider transition animation is too slow, it leaves a blank space in between each transition.
- It's better to add an option (like arrows) to move between the slides at will.

- The typing animation makes reading slow, the description below it is out of sync.
- The 'industry leader' tag and 'get started' button seem oddly placed.
- The "scroll to explore" prompting animation is not centered and may not be needed entirely.

- The diagram is not interactable and causes an issue while scrolling. If you move your mouse over it you are not able to scroll. It is also cut off on the left.

Services page:

Process improvement page:

- The 'Back to Services' button can be more prominent and should persist even when scrolling down.

Consulting and Advisory Practice

NAVSAN thought leadership helps in creating value throughout the value chain. We are a strategic partner for our global clients in every step to drive change and sustain enterprise growth. We focus on continuous improvements and help them scale with a competitive advantage. Our NAVSAN advisory practice professionals serve as a trusted partner in supporting transformative projects globally. Our advisors have deep transformative experience in all major business functions across Banking, Insurance and Financial Services. NAVSAN advisory practice teams have an in-depth understanding of current business and regulatory challenges and have a collaborative approach with innovative ideas that come with hands-on experience.

Our industry-leading research and in-house intellectual tools and frameworks create measurable business values for our client partners.

- It's better to change the boxes to a light background for consistency and readability.

Business process outsourcing page:

- The layout will be better and more consistent if it was one after the other instead of side by side. It would also emphasise 'our capabilities' more.

- When switching between tabs, the transition animation is blurry and unpleasant.

- The Transition Framework diagram needs to be appropriately resized.

AI solutions page:

- The video player has some drawbacks.
 - The buttons look the same for pause/play or mute/unmute.
 - The video plays automatically without sound and using the progress bar is confusing.

- The line below the floating icons can be removed.

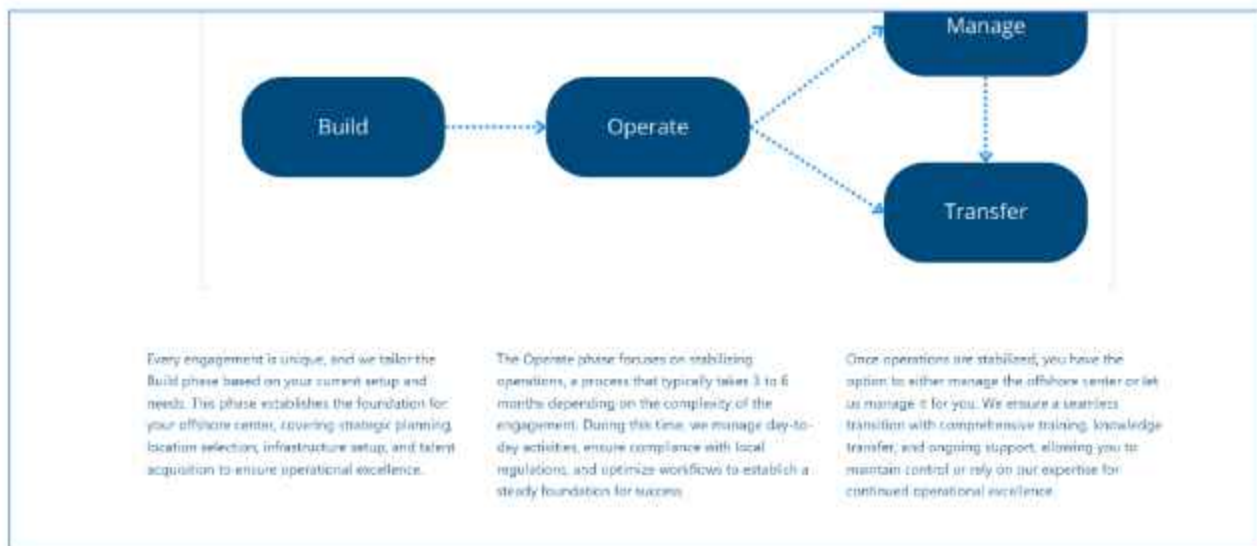

Captive setup page:

- The banner text is much longer than the other services page banners. We can consider shortening it. We can probably add the current banner text as a description at the beginning of the page.

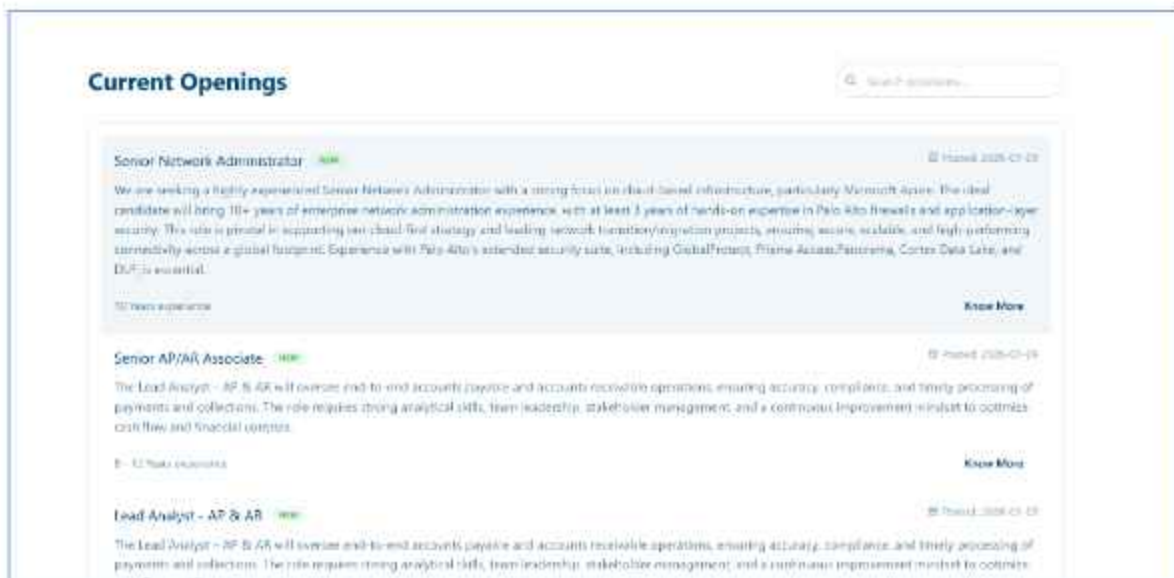

- The three text paragraphs need better visual organisation like bordered text boxes.

Careers page:

- Current openings can be organised in multiple pages limiting the entries to 10 per page as scrolling to the bottom is cumbersome.

- The '**Back to careers**' button should persist when scrolling down, clicking on the button should bring us back to **Current Openings** section rather than the top of the Careers page.

Blogs page:

A visual separation between the blogs with the help of borders or a line would give a better look and experience.

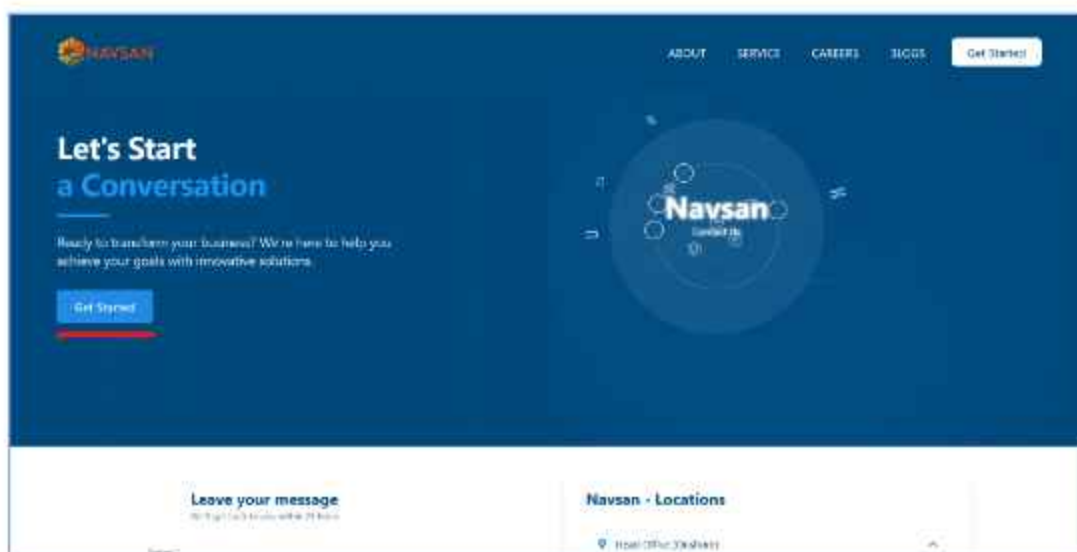

- The blog content is confined in a more narrow area than needed.

- The 'back to blogs' button must be more prominent and persist when scrolling down.

Get started page:

- We can consider removing the 'get started' button in this banner, and when clicked it scrolls down.

Other considerations:

- Depending on the zoom or magnification, the layout becomes messy and words get cut off in the Headings. It needs to be adjusted based on the user's screen dimensions.

- The animation when switching pages is very slow in the 'About' section, a little slow in 'careers' and 'blogs' sections, and quick in the 'services' section.
- We need to add images in careers and blogs page banners to keep it consistent with the About and Services page banners.
- Even keeping the color scheme the same, the look of the website can be made to look more modern with gradients and textures in the colours, as the present one looks a little plain.
- The 'Twitter' symbol must be updated to the new 'X' symbol and the page it links to doesn't exist.

- LinkedIn link works, but linked in page could be improved as it doesn't even have a profile image.

Content Improvements:

- The content in general seems very generic as if it is following a used template. So it needs to be personalized to fit Navsan's profile.
- There are some areas like the 'AI solutions' section where there is a lot of explanation of AI in general. We can consider adding something specific that the company offers currently.
- There are many inconsistencies in the metrics and values such as the years of experience showing 300+. These need to be updated.
- We can optimize content with key words to improve searches for SEO.
- Better images can be used. Existing ones seem AI generated and not lively.

For mobile devices:

The user experience for mobile is not great. There are some issues apart from the ones that have been mentioned earlier.

- The header bar is too thick.
- Navigating to other sections is hard as we have to scroll all the way to the top of the page for the Hamburger Menu button (3 lines button) because it disappears while scrolling down. This can be solved by adding the sections to the header bar or by a swipe feature to open the navigation menu.

- The layout is very linear compared to how it is on PC browsers.
Hence scrolling down the page takes a long time, so a scroll bar can be added.
- Images are missing in many areas.
- There is a slight transparency with the background having an image which makes it slightly hard to see.
